

Embedding SitePal in JS Framework React-Native

7/15/2021

To embed your SitePal Scene in React-Native, you will need to -

A. Load your SitePal Scene in a Webview - you need to embed it into a web page which you would load into the Webview.

B. The SitePal embed code used in the Webview should be amended to clearly state the protocol ('http' or 'https').

The SitePal embed code is "protocol-agnostic" if you will – using syntax which enables the web browser to auto-detect the protocol. But Webview does not do that, so you must modify the embed code to explicitly specify 'http' or 'https'.

Here's how -

If this is your SitePal embed code -

```
<script type="text/javascript"
src="//vhss-d.oddcast.com/vhost_embed_functions_v4.php?acc=XXX&js=0"></
script>
<script
type="text/javascript">AC_VHost_Embed(XXX,600,800,"",1,1,YYY,0,1,0,"ZZZ",0,0)
;</script>
```

Update it as follows, by adding the protocol as indicated below (marked in red):

```
<script type="text/javascript"
src="https://vhss-d.oddcast.com/vhost_embed_functions_v4.php?acc=XXX&js=0"></
script>
<script
type="text/javascript">AC_Vhost_Embed(XXX,600,800,"",1,1,YYY,0,1,0,"ZZZ",0,0)
;</script>
```

Finally - a source code project example and a walkthrough video are available:
